

Data Handling: Import, Cleaning and Visualisation

Lecture 8:

Data Preparation

Prof. Dr. Ulrich Matter

19/11/2020

Updates

Recap: Data Import

Sources/formats in economics

- CSV (typical for rectangular/table-like data)
- Variants of CSV (tab-delimited, fix length etc.)
- XML and JSON (useful for complex/high-dimensional data sets)
- HTML (a markup language to define the structure and layout of webpages)
- Unstructured text

Sources/formats in economics

- Excel spreadsheets (`.xls`)
- Formats specific to statistical software packages (SPSS: `.sav`, STATA: `.dat`, etc.)
- Built-in R datasets
- Binary formats

A Template/Blueprint

```
#####  
# Data Handling Course: Example Script for Data Gathering and Import  
#  
# Imports data from ...  
# Input: links to data sources (data comes in ... format)  
# Output: cleaned data as CSV  
#  
# U. Matter, St.Gallen, 2019  
#####  
  
# SET UP -----  
# load packages  
library(tidyverse)  
  
# set fix variables  
INPUT_PATH <- "/rawdata"  
OUTPUT_FILE <- "/final_data/datafile.csv"
```

Script sections

Finally we add sections with the actual code (in the case of a data import script, maybe one section per data source)

```
#####  
# Project XY: Data Gathering and Import  
#  
# This script is the first part of the data pipeline of project XY.  
# It imports data from ...  
# Input: links to data sources (data comes in ... format)  
# Output: cleaned data as CSV  
#  
# U. Matter, St.Gallen, 2019  
#####  
  
# SET UP -----  
# load packages  
library(tidyverse)  
  
# set fix variables  
INPUT_PATH <- "/rawdata"  
OUTPUT_FILE <- "/final_data/datafile.csv"  
  
# IMPORT RAW DATA FROM CSVs -----
```

Parsing CSVs

Recognizing columns and rows is one thing...

```
swiss
```

```
## # A tibble: 47 x 7
##   District      Fertility Agriculture Examination Education Catholic Infant.Mortality
##   <chr>          <dbl>         <dbl>         <dbl>         <dbl>         <dbl>         <dbl>
## 1 Courtelary      80.2           17           15           12           9.96           2
## 2 Delemont        83.1           45.1          6            9           84.8           2
## 3 Franches-Mnt    92.5           39.7          5            5           93.4           2
## 4 Moutier         85.8           36.5          12           7           33.8           2
## 5 Neuveville      76.9           43.5          17           15           5.16           2
## 6 Porrentruy      76.1           35.3          9            7           90.6           2
## 7 Broye           83.8           70.2          16           7           92.8           2
## 8 Glane           92.4           67.8          14           8           97.2           2
## 9 Gruyere         82.4           53.3          12           7           97.7           2
## 10 Sarine          82.9           45.2          16           13           91.4           2
## # ... with 37 more rows
```

What else did `read_csv()` recognize?

Parsing CSVs

- Recall the introduction to data structures and data types in R
- How does R represent data in RAM?
 - **Structure**: `data.frame/tibble`, etc.
 - **Types**: `character, numeric`, etc.
- Parsers in `read_csv()` guess the data **types**.

Parsing CSV-columns

```
library(readr)
```

```
read_csv('A,B  
12:00, 12:00  
14:30, midnight  
20:01, noon')
```

```
## # A tibble: 3 x 2  
##   A      B  
##   <time> <chr>  
## 1 12:00 12:00  
## 2 14:30 midnight  
## 3 20:01 noon
```

Parsing CSV-columns: guess types

Under the hood `read_csv()` used the `guess_parser()` - function to determine which type the two vectors likely contain:

```
guess_parser(c("12:00", "midnight", "noon"))
```

```
## [1] "character"
```

```
guess_parser(c("12:00", "14:30", "20:01"))
```

```
## [1] "time"
```

Data Preparation/Munging/Wrangling

The dataset is imported, now what?

- In practice: still a long way to go.
- Parsable, but messy data: Inconsistencies, data types, missing observations, wide format.

The dataset is imported, now what?

- In practice: still a long way to go.
- Parsable, but messy data: Inconsistencies, data types, missing observations, wide format.
- **Goal** of data preparation: Dataset is ready for analysis.
- **Key conditions:**
 1. Data values are consistent/clean within each variable.
 2. Variables are of proper data types.
 3. Dataset is in 'tidy' (in long format)!

Some vocabulary

Following Wickham (2014):

- **Dataset**: Collection of **values** (numbers and strings).
- Every value belongs to a **variable** and an **observation**.
- **Variable**: Contains all values that measure the same underlying attribute across units.
- **Observation**: Contains all values measured on the same unit (e.g., a person).

Tidy data

| country | year | cases | population |
|-------------|------|-------|------------|
| Afghanistan | 1999 | 745 | 19987071 |
| Afghanistan | 2000 | 866 | 20593360 |
| Brazil | 1999 | 3737 | 17206362 |
| Brazil | 2000 | 8488 | 17460898 |
| China | 1999 | 21258 | 127291272 |
| China | 2000 | 21766 | 128642583 |
